

I do not know how you can justify NAB petition, because the broadcaster only are able to play to what they feel will give them the highest ratings. They could care less if the information they broadcast is important, such as public awareness programs that they play at 6:00a.m. on Sunday morning when nobody is listening. XM is important to me since my daily travels take me out of range of most local radio stations. XM plays what I want to hear and I can gather important weather information immediately, instead of waiting for the top and bottom of the hour.

Please reject the NAB petition 04-160, and protect our freedom to hear what we want to hear.
